Customer-Specific Variants

AK ERM 2xx0 **TTR ERM 2x00**

Modular Angle Encoders
with Magnetic Scanning and
Mechanical Fault Exclusion

February 2017

ERM 2200 series

- Consisting of AK ERM 2280 and TTR ERM 2200C or TTR ERM 2200
- Modular encoders with magnetic scanning principle
- Signal period approx. 200 µm (at circumference)
- For rotary and tilting axes
- Suitable for fault exclusion for loosening of the mechanical connection

mm

 Tolerancing ISO 8015
 ISO 2768 - m H
 < 6 mm: ±0.2 mm

W1 = Without mechanical fault exclusion
W2 = With mechanical fault exclusion

- = Bearing of mating shaft
- ① = Shaft fit; ensure full-surface contact
- ② = Axial tolerance of mating shaft
- ③ = Reference mark position
- ④ = Cable support
- ⑤ = Mounting distance of 0.05 mm set with spacer shim
- ⑥ = Centering collar
- ⑦ = Direction of shaft rotation for output signals according to interface description

Scanning head	AK ERM 2280
Interface	$\sim 1 V_{PP}$
Cutoff frequency –3 dB	$\geq 300 \text{ kHz}$
Signal period	$\approx 200 \mu\text{m}$
Line count*	See <i>Scale drum</i>
Electrical connection*	Cable 1 m, with or without coupling
Cable length	$\leq 150 \text{ m}$ (with HEIDENHAIN cable)
Voltage supply	DC 5 V $\pm 0.5 \text{ V}$
Current consumption	$\leq 150 \text{ mA}$ (without load)
Vibration 55 Hz to 2000 Hz Shock 6 ms	$\leq 400 \text{ m/s}^2$ (EN 60068-2-6) $\leq 1000 \text{ m/s}^2$ (EN 60068-2-27); with fault exclusion for loosening of the mech. connection: 400 m/s^2
Operating temperature	$-10 \text{ }^{\circ}\text{C}$ to $+60 \text{ }^{\circ}\text{C}$
Protection EN 60529	IP67
Mass	$\approx 0.15 \text{ kg}$ (without cable)

* Please select when ordering

Scale drum	TTR ERM 2200C and TTR ERM 2200		
Measuring standard	MAGNADUR graduation; signal period of approx. 200 µm		
Line count*	1024	1200	1440
Position error per SP¹⁾	±9"	±8"	±6.5"
Accuracy of graduation	±12"	±10"	±8.5"
Reference mark*	Distance-coded or one		
Angle for absolute reference (with distance-coded RM)	≤ 45°	≤ 30°	≤ 24°
Permissible axial motion	±1.25 mm		
Outside diameter	64.37 mm	75.44 mm	90.53 mm
Drum shape	A56	A01	A26
Inside diameter	40 mm	40 mm	55 mm
Bolt hole circles	Ø 50 mm; 6 x M6	Ø 50 mm; 6 x M6	Ø 70 mm; 6 x M6
Mechanically permissible speed	22 000 rpm	19 000 rpm	18 500 rpm
Moment of inertia of rotor	$0.15 \cdot 10^{-3} \text{ kgm}^2$	$0.32 \cdot 10^{-3} \text{ kgm}^2$	$0.63 \cdot 10^{-3} \text{ kgm}^2$
Max. angular acceleration	50 000 rad/s ²	27 000 rad/s ²	20 000 rad/s ²
Mass	0.21 kg	0.35 kg	0.44 kg

* Please select when ordering

1) Position error within one signal period and the accuracy of the graduation together result in the encoder-specific error; for additional error from mounting and bearing of the measured shaft, see *Measuring accuracy* in the catalog *Modular Angle Encoders with Magnetic Scanning*.

Scale drum	TTR ERM 2200C and TTR ERM 2200

¹⁾ Position error within one signal period and the accuracy of the graduation together result in the encoder-specific error; for additional error from mounting and bearing of the measured shaft, see *Measuring accuracy* in the catalog *Modular Angle Encoders with Magnetic Scanning*.

- Consisting of AK ERM 2420 or AK ERM 2480 and TTR ERM 2400 or TTR ERM 2400 C
- Modular encoders with magnetic scanning principle
- Signal period approx. 400 µm (at circumference)
- For C axis on lathes
- Suitable for fault exclusion for loosening of the mechanical connection

Fault exclusion for the loosening of the mechanical connection

Specifications

This customer-specific Product Information document contains technical characteristics of modular magnetic encoders that are not included in the brochure “Modular Angle Encoders with Magnetic Scanning.” Unless otherwise specified in this Product Information document, the specifications and installation instructions given in the brochure apply.

Additionally, the requirements and limitations for installation with mechanical fault exclusion are described in this Product Information document.

Mechanical fault exclusion

Mounting with mechanical fault exclusion is to be seen as an option. If no mechanical fault exclusion is required for the safety solution, the drum can be fitted with a smaller interference fit (dimensioning of the drive shaft according to W1).

A mechanical fault exclusion is possible for the following products:

- AK ERM 2280 (ID 1144028-xx) together with the scale drum TTR ERM 2200 (ID 733349-xx) or TTR ERM 2200 C (ID 671712-xx)
- AK ERM 2420 with ID 1144042-xx or AK ERM 2480 with ID 1144048-xx or AK ERM 2410 with ID 1144041-xx or AK ERM 2490 M with ID 1144043-xx together with the TTR ERM 2400 scale drum with ID 1144140-xx or TTR ERM 2400 C with ID 1144150-xx

In addition to the data interface, the mechanical connection of the encoder to the motor is relevant to safety. The standard for electrical drives, EN 61800-5-2, defines the loosening of the mechanical connection between the encoder and drive as a fault that requires consideration. Since it cannot be guaranteed that the control will detect such errors, in many cases a fault exclusion for the loosening of the mechanical connection is required.

The machine manufacturer is responsible for the dimensioning of mechanical connections in a drive system. The OEM should ideally consider the application conditions for the mechanical design. Providing objective evidence of a safe connection is time-consuming, however. For this reason, HEIDENHAIN has developed a mechanical fault exclusion for the ERM 2xx0 series.

The qualification of the mechanical fault exclusion was performed for a broad application range of the encoders. This means that fault exclusion is ensured under the operating conditions listed below. The great range of temperatures in combination with the multitude of material characteristics, as well as the maximum permissible shaft speeds and accelerations require an interference fit of the drum. Because of the dimensioning of the interference fit, and taking into account all safety factors, HEIDENHAIN recommends heating the scale drum.

The scanning head and scale drum are mounted by screws, with special attention paid to the following with regard to installation with mechanical fault exclusion:

Mechanical connection	Fastening	Safe position for the mechanical coupling ¹⁾	Restricted characteristic values ²⁾
Scanning head	Screw connection: ³⁾ M4 ISO 4762 8.8	±0.025°	• Maximum acceleration of the scanning head including vibration 55 Hz to 2000 Hz (as per EN 60068-2-6) and shock 6 ms (as per EN 60068-2-27) ≤ 400 m/s² See <i>Specifications</i>: • Maximum angular acceleration of the scale drum See <i>Dimensions</i>: • Inside diameter and mounting tolerance of the measured shaft • Surface roughness of the mating surfaces • Screw depth See <i>Material</i>: • Usable materials
Scale drum	Screw connection: ³⁾ M5 ISO 4762 8.8		

¹⁾ Fault exclusions are possible only for the explicitly named mounting option

²⁾ Unlike ERM 2xx0, without mechanical fault exclusion

³⁾ Friction coefficient class B as per VDI 2230

Material

For the material of the mating shaft and stator, the data given in the table is to be observed.

Mounting temperature

All information on screw connections is given with respect to a mounting temperature of 15 °C to 35 °C.

Mounting the scale drum

An oversize of the shaft is required for fault exclusion. The scale drum should preferably be shrunk thermally onto the mating shaft and additionally be fastened with screws. For this purpose, the scale drum must be heated slowly before mounting. Use a heat chamber or a heat plate (but no induction heating sources). The diagram shows the recommended minimum temperatures for the different drum diameters. The maximum temperature should not exceed 140 °C.

During shrink-fitting, make sure that the hole patterns of the scale drum and mating shaft are properly aligned. Appropriate positioning aids (setscrews) can facilitate mounting. When the scale drum has cooled down, all mounting screws have to be tightened again with the correct torque. The mounting screws used for the assembly of the scanning head and scale drum must be used only to secure the scanning head and the scale drum. Do not additionally fasten any other components with these screws.

Removing the scale drum

The scale drum is removed using the corresponding back-off threads in the drum. To do so, fasten greased screws and tighten them in a row until the scale drum comes off the shaft. It is also helpful here to use setscrews inserted into the mating shaft, on which the screws in the back-off threads apply pressure.

Mounting the scanning head

Care must be taken to ensure that the correct scale drum and scanning head are used (correct size and number of signal periods). In order to mount the scanning head, the provided spacer shim is applied to the surface of the circumferential scale drum. The scanning head is pressed against the shim, fastened, and the shim is removed.

	Mating shaft (drum connection)	Mating stator (scanning head connection)
Material	Steel	Steel/cast iron
Tensile strength R_m	$\geq 600 \text{ N/mm}^2$	$\geq 250 \text{ N/mm}^2$
Shear strength τ_m	$\geq 390 \text{ N/mm}^2$	$\geq 290 \text{ N/mm}^2$
Elastic modulus E	200 000 N/mm ² to 215 000 N/mm ²	110 000 N/mm ² to 215 000 N/mm ²
Coefficient of thermal expansion α_{therm}	$(10 \text{ to } 13) \cdot 10^{-6} \text{ K}^{-1}$
